AndChill Meeting 10/18

Rosemond Dorleans, John Parsons, Arman Rahman, Hugo Zul

Agenda

1. Introductions between group and TAs
2. Review of design document
   a. Explanation of textual constraint for which we lost points
3. Review of progress
   a. What kind of homepage does an MVP require?
4. Discussion of Chop matching implementation
5. Other suggestions?
6. Closing

Progress Report

Progress
- All listed milestones below
- Implemented a basic login system to allow us to navigate the app
- Automated tests for the Chat model

Achieved Milestones
- User data model
- Motivation
- Chop data model
- View accepted Chops
- Chat with accepted Chops
- Homepage/site template

Missed Milestones
- Users matched with up to ten Chops per day

Difficulties
- Figuring out how Chop matching should work
  ○ Create possible Chops for all users when they register and then match randomly?
  ○ Create Chops when they are necessary?
  ○ Chop presentation priority:
    ■ 1. Chops already presented to another party
    ■ 2. Other highly rated Chops

- - Removing the 10-Chop limit?
  - Implementing accepted Chop features without Chop matching working (had to manually enter data)

Design Changes
- Have not yet used any front-end frameworks or passport.js
  - Not sure if these are necessary
- No overarching design changes yet, though we want to entirely on movies for the scope of the project
